Copilot Agent Request — Intake Form

Data Science & AI Team. Fill out what you can — "I don't know yet" is a fine answer; sections 3 and 4 matter most. Prefer a conversation? Our **Agent Architect** agent asks these same questions interactively.

1. About you

Name / Dept / Role: _____

Best way to reach you: _____

Who will **own** this agent after handoff (keep instructions updated, collect user feedback)?

_____

Usually you or someone on your team — not the AI team.

2. The process in one paragraph

What do you (or your team) do today, by hand, that you want an agent to draft for you?

3. The input *(what the user gives the agent each time)*

What is it? (a meeting transcript, a report, evaluation forms, notes, …)

_____

Where does it come from today, and in what format? (Teams transcript, Word doc, email, …)

_____

☐ Check here if the input can involve patient data, student/learner records, or other regulated data.

This doesn't disqualify the request — it changes how we test and where outputs may go. All testing uses synthetic data regardless.

4. The output *(the single most important section)*

Do you have a template, example, or checklist of what good output looks like?

☐ Yes — **attach it** ☐ No — we'll help you draft one first *(that's step one, before any agent)*

Required sections, checklists, or fixed value sets the output must follow exactly — list or attach:

5. Audiences

Who reads the output? _____

Do different readers need different versions (e.g., detailed internal + concise recipient-facing)?
☐ No ☐ Yes — which parts must be word-for-word identical across versions?

_____

6. Review and sign-off

Who checks the draft before it's used or filed? _____

Does anyone the output is *about* need to confirm it (a learner, an employee, a committee)?
☐ No ☐ Yes — who: _____

7. Users and scale

Who will use the agent (names/roles, roughly how many people)?

_____

How often will it run? (per meeting, weekly, quarterly, …) _____

Roughly how much time does the manual version take today? _____

8. Timing

When do you want to start using it? Any hard deadline (accreditation cycle, program launch, …)?

_____

What happens next: we review within a week. Most requests become a standard build: your template goes into agent instructions, you get a build guide plus a synthetic test file, and after a short feedback loop you own the agent — your colleagues can use it **without premium Copilot licenses** (validated in our tenant). Requests needing live document libraries, scheduled runs, system integration, or a custom interface are scoped separately as projects.
